

25 ANIVERSARIO
astiglass
TRANSPARENT QUALITY

50 years
experience

A leading company in the transformation and distribution of glass.

ASTIGLASS originated at the beginning of the 60's, when Donato Aliaga Caro, father of the present day owners, founded his glass workshop.

The family company ASTIGLASS has its beginnings in 1993 and over the years put into practice innovations in the production system, carrying out a modernization process and acquiring the newest machinery for glass treatment.

50 years experience, effort and innovation achieve and increase productivity and product quality, situating ASTIGLASS as a reference company in the glass sector.

Productive Capacity

In ASTIGLASS over 26.000m2 of productive area with a production capacity of 10,000 tons of glass per year. Facilities that are totally designed to affront the challenge of becoming leaders in the transformation of glass

Our state-of-the-art facilities and our highly qualified team make it possible for ASTIGLASS to respond efficiently to all customer needs.

Innovation

With the most prestigious machinery in the glass industry along with innovative and automatic systems optimizing each stage of the manufacturing process, we are able to offer a wide range of products and forms.

Glasses from up to 6.000 x 3.210 mm.

- Heat soak test (HST)
- Numeric control
- Digital serigraphy
- Tempered oven
- Laminated line
- Double glazing line

Quality

In ASTIGLASS we are fully committed to quality, having several mark certifications that assure it.

Our certificates, together with our personal compromise with quality, ensure an added guarantee to our clients.

Moreover, manufacturing under the CE trademark enables us to offer a **ten year guarantee** for double glazing. (*)

Our products

ASTIGLASS offers innovative solutions, including functionality, versatility and aesthetics. Efficient solutions available for architecture, engineering and interior decorating.

We cover the needs of the most demanding sectors, offering a wide range of products and forms.

DOUBLE GLAZING

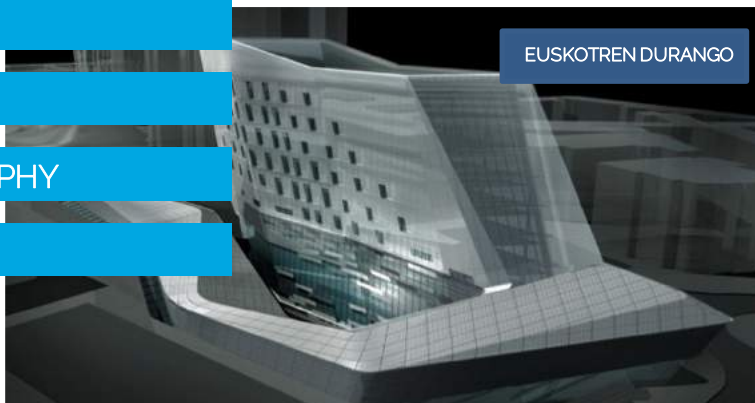

TEMPERED & HEAT-STRENGTHENED GLASS

LAMINATED GLASS

COAT GLASS

DECORATION AND SERIGRAPHY

FIREPROOF GLASS

Double Glazing

Double glazing consists of two or more pieces of glass separated by an air vacuum, with the application of different techniques.

GUARDIAN SELECT achieves the best results in:

- Acoustics
- Spectrophotometrics
- Thermic needs
- Safety
- Decoration
- Economics
- Ecology
- Condensation control

The modern machinery used in Astiglass for the manufacture of double glazing, as well as the guarantee of the Guardian Select brand, together with the C+quality and the CE branding make our double glazing a prime quality product, permitting us to offer a 10 year guarantee of the vacuum air tightness, satisfying, in this way, the specifications of the Technical Building Code.

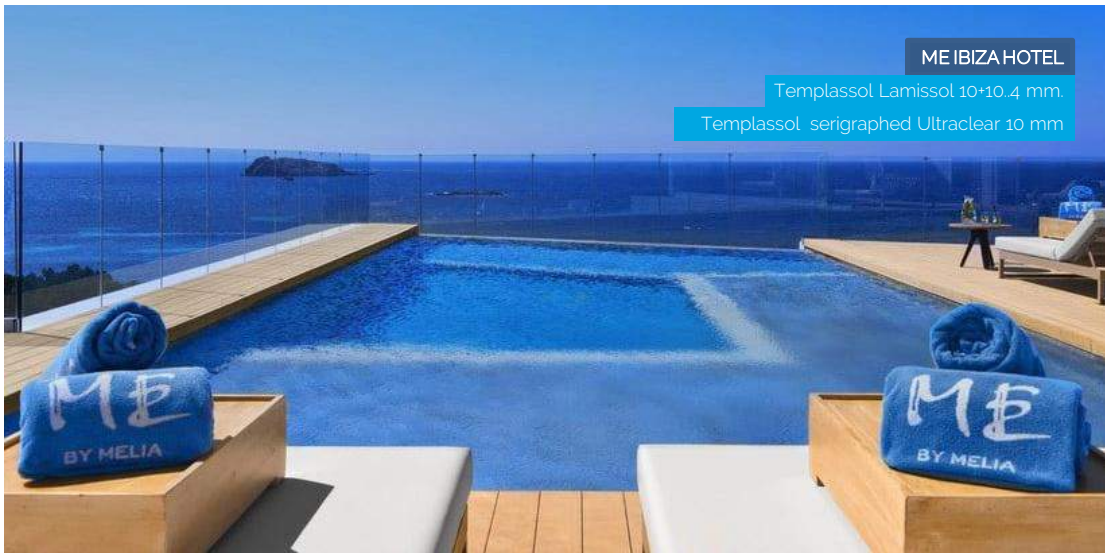

Tempered Glass

Our tempered glass TEMPLASSOL is four times more resistant to breakage on impact

Different methods are used to modify the physical characteristics of the glass, thus obtaining

- Mechanical resistance to impact
- Resistance to thermal blows
- Mechanical resistance between 1200 and 2000kg/cm²
- Mechanical resistance to compression
- Physical safety (in case of breakage)

ME IBIZA HOTEL

Templassol serigraphed Ultraclear 10 mm

MOROCCO MALL

Templassol Lamissol 10+10.4mm. for banisters
Curved tempered 10 mm. glass for panoramic elevators

Laminated Glass

LAMISSOL laminated glass offers magnificent quality in clearness, resistance and elasticity, giving this type of glass its essential characteristic SAFETY.

Types of laminated glass:

- Physical safety (Lamissol)
- Resistance in case of aggression and robbery (Lamissol safe)
- Bullet and explosion proof resistance (Lamissol preserve)
- Treadable glass (Lamissol floor)
- Decorative Lamissol.

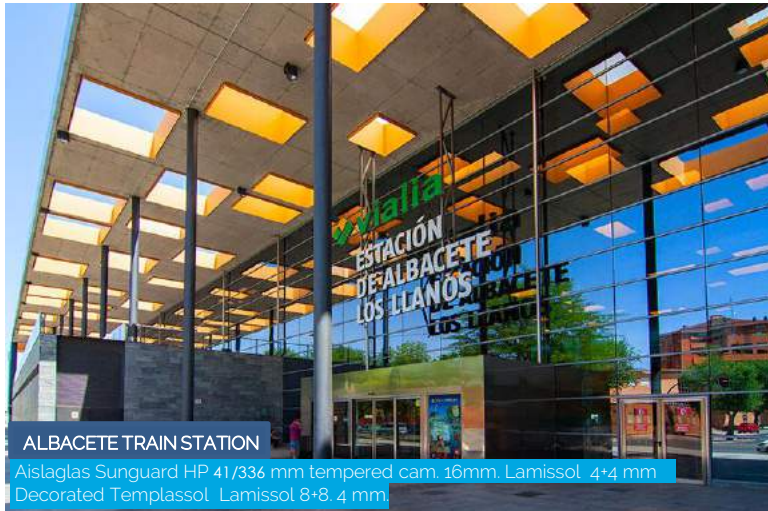

Coat Glass

Our coat glass is supplied by internationally known brands.

Coat glass (solar control and low emissivity) is found fundamentally in the construction sector and under the permanent supervision of the CTE (Technical Building Code), obliging all manufacturers to develop improvements in their glass, the most important of which being, that the glass offers the highest amount of light possible (depending on the geographical situation of the building).

In addition to the technical specifications, this coat glass should be more and more versatile in its transformation (temperate, thermo-hardened, curved, polished edges, with drill holes, etc

glaströsch

SAINT-GOBAIN

PILKINGTON

ASTIGLASS, supporting the most important manufacturers of fireproof glass.

Our fireproof glass satisfies the most demanding fireproof safety measures and at the same time offers other acoustic, aesthetic, solar control and comfort details.

The multifunctional aspect of the product achieves outstanding results in architecture, illumination and quality bringing a sense of comfort to each room without diminishing safety in any way.

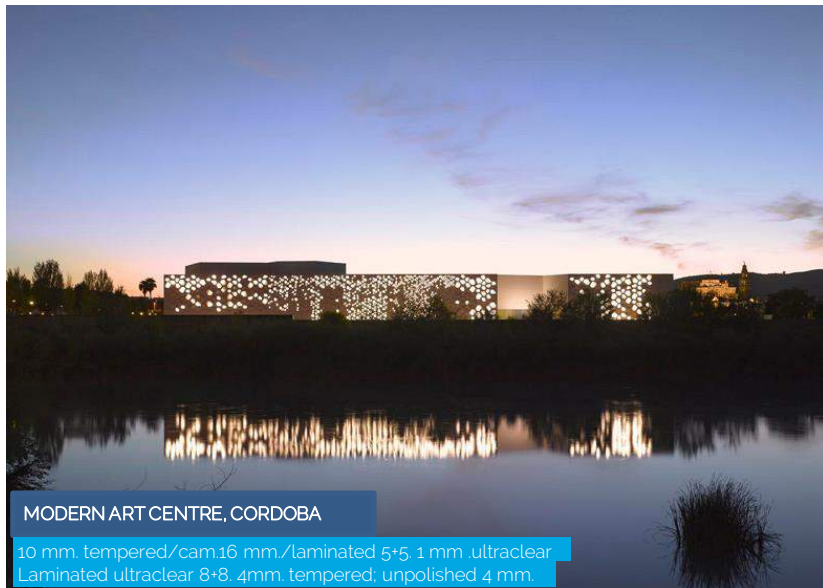

Decoration and Serigraphy

Decorative glass is found on walls, floors, ceilings, roofs, furniture, lighting, banisters, enclosures and fencing, etc

This type of glass can be temperate, laminated and even form part of double glazing, combining, in this way, the different advantages of glass transformation methods, without sacrificing attractive and personal designs. Serigraphic glass has, on one side, unalterable decorative patterns, with the application of glass enamels, using a serigraphic impression system.

Our Works

Our facilities, together with our work team, make it possible for Astiglass to provide an efficient response to all types of projects.
